

Catch ketosis before it catches you!

the **PortaBHB**[™] milk ketone test

gives you the choice!

This dipstick screens for sub-clinical ketosis. It detects the presence of ketone bodies in milk – specifically BHB (beta-hydroxybutyrate).

High levels of BHB are an indicator of ketosis, a metabolic disorder caused by a negative energy balance.

Each vial contains 25 test strips

Easy • Affordable • On-farm screening • Quick results

Did you know?

- Ketosis causes 0.5% death loss in affected cows.
- 5% of affected cows are culled.
- Ketosis averages 506 lbs milk loss per affected cow.
- Each case costs approximately \$150.
- Ketosis increases risk of impaired fertility and displaced abomasum.
